

PRODUCT ELEMENTS

ESP32-CAM to detect the area and objects around with 120° point of view

Sensor to detect the objects around from the camera detection

Buzzer to send signal to the user with vibration and sound from the detected objects

Battery for the energy of this product (1000 mAh)

VISION

To realize innovative and inclusive assistive technology that enhances the independence, safety, and quality of life of individuals with visual impairments through smart navigation solutions based on the Internet of Things (IoT).

MISSION

1. To develop intelligent navigation devices capable of detecting obstacles and providing real-time alerts through integrated audio, vibration, and visual feedback.
2. To provide a real-time GPS system that enhances user safety and allows families to easily monitor location.
3. To optimize camera and sensor technologies, including the potential integration of Artificial Intelligence (AI) for object recognition and text reading.
4. To create a user-friendly application interface that is easy to operate for individuals with visual impairments and their companions.
5. To promote technological inclusivity through innovations that are affordable and accessible to diverse communities.
6. To conduct continuous testing and evaluation to ensure the effectiveness, comfort, and safety of the device for users.

SENAVISION

Glucose Stabilizing Herbal Capsules for Diabetics

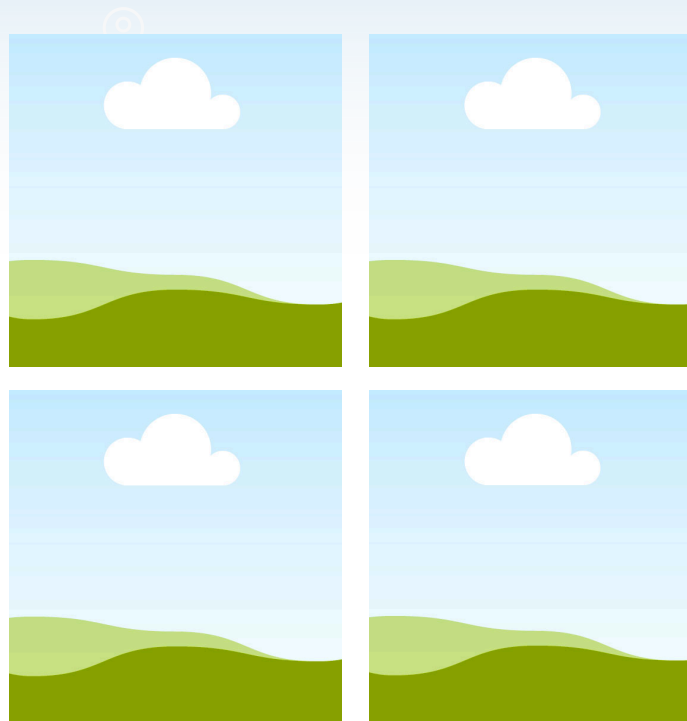

Your Diabetes Care Solution!

Made By :
Zabrina Salsabila kumalaratih, Mevva Callysta Justin, Vallerie Graciachrista Yudhistira, Ayudya Azzahra, Atthar Ibrahim Aquilla Wibowo, Nathanael Christian Setiadi

OUR FEATURES

- Smart Surveillance – Real-time visual monitoring with high-tech cameras.
- AI Object & Motion Detection – Automatically detects objects, movement, and activities.
- Instant Alerts – Receive fast notifications when unusual events occur.
- Face Recognition – Identify faces to enhance security.
- Cloud-Based Access – Access data and recordings anytime, from any device.
- Analytics Dashboard – Reports and insights for more accurate decision-making.
