Collaboration with clinics, physiotherapists, hospitals, and educational institutions.

Partnerships with government health authorities to support nationwide health programs.

First AI-powered posture & gait mobile app in Indonesia with localized anthropometric calibration.

| The Problems

- Posture and gait assessments still rely on manual, subjective methods.
- Lack of biomechanical precision.
- Current tools use Western anthropometric data → less accurate for Indonesians.
- Limited AI and local data integration in healthcare.

| The Result

- Usability**
Clean design, user-friendly interface.
- Accuracy**
Reliable AI-powered analysis tailored to Indonesian anthropometric data.
- Relevance**
Context-specific, solving the mismatch of Western-based tools.
- Adoption**
Positive feedback from healthcare professionals and potential users.

| The Solutions

VertaFlex: A mobile app integrating AI-based posture & gait analysis with Indonesian anthropometric data.

- Combines machine learning, computer vision, and human-centered design.
- Provides accurate, objective, and accessible assessments.
- Supports early detection of musculoskeletal issues.

The Feature:

- Real-time posture & gait monitoring
- Indonesian-calibrated analysis
- Temporal analytics for progress tracking
- Personalized exercise & treatment recommendations
- Clinical trial expansion with hospitals & clinics

| Conclusion

VertaFlex redefines posture and gait assessment with AI-driven, Indonesian-calibrated analysis. By integrating precision technology, local data, and user-friendly design, VertaFlex empowers healthcare professionals with early detection tools that improve patient outcomes and strengthen Indonesia's health-tech independence.
