

Our Features

Multi-Parameter Air Quality Monitoring

Actionable Health Recommendations

Real-Time Data Monitoring

Cloud-Based IoT Connectivity

Early Warning & Smart Alerts

Interactive Data Visualization Dashboard

How it works

Smart Data Collection

AeroNexa uses advanced sensors to monitor indoor air quality, temperature, humidity, and air pressure.

Reliable Processing & Connectivity

Data is accurately processed onboard and sent wirelessly via Wi-Fi to a secure cloud platform.

Real-Time Monitoring

Users can view live air-quality data through a clear and intuitive dashboard.

Alerts & Recommendations

AeroNexa provides instant alerts and smart suggestions when air conditions exceed safe limits.

Problem

Indoor Air Quality (IAQ) in residential environments often reaches levels 2-5 times worse than outdoor air due to cooking emissions, dust accumulation, volatile organic compounds (VOCs), poor ventilation, and fluctuating microclimate conditions. These factors contribute to respiratory irritation, allergies, asthma exacerbation, headaches, fatigue, and decreased cognitive performance. Vulnerable populations such as children, the elderly, and individuals with respiratory diseases face even higher risks.

Solutions

AeroNexa offers an integrated and affordable solution by combining multiple environmental sensors into one IoT-based system. It delivers real-time monitoring, automatic early-warning alerts, and clear, user-friendly recommendations. This approach helps households quickly identify air-quality problems and take corrective actions—making indoor health management more accessible.

AeroNexa

AI-Driven Solutions for Indoor Air Quality: Addressing Building-Related Illness and Health Risks

What is AeroNexa?

AeroNexa is an IoT-based indoor air-quality and microclimate monitoring system designed to continuously monitor key environmental parameters, including PM2.5, PM10, CO₂, VOC, temperature, humidity, and air pressure. The system provides real-time data visualization, early warnings, and actionable insights to help users maintain healthier, safer, and more comfortable indoor environments.

Vision

To enable healthier and safer indoor environments by providing accessible, intelligent, and reliable indoor air-quality monitoring that empowers people to understand the air they breathe and take preventive actions for better well-being.

Mission

- To deliver accurate, real-time indoor air-quality monitoring using integrated environmental sensors.
- To develop an affordable and user-friendly multi-parameter monitoring system for household and indoor use.
- To provide early warnings and data-driven health recommendations that help prevent air-quality-related health issues.
- To raise public awareness about the importance of Indoor Air Quality (IAQ) in improving quality of life and well-being.
