

SereneSight: An Intelligent, Low-Cost Mental Health Monitoring System Based on Microexpressions to Maintain Employee Work Performance

| The Problems

High Levels of Stress and Fatigue in the Workplace

Lack of Early Detection Systems

Limitations of Mental Health Assessment Tools

Rising Mental Health Care Costs

| The Solutions

SereneSight enhances workplace well-being by providing easily accessible emotional condition recommendations based on real-time facial expression analysis, making it ideal for companies with limited resources for direct individual mental health monitoring.

The Feature:

- 1.Real-Time Microexpression Detection
- 2.Automated Emotional State Analysis
- 3.Fatigue Level Assessment
- 4.Personalized Break Recommendations
- 5.Weekly Mental Health Reports
- 6.Early Warning Notification System

| The Method

| Business Opportunity

TAM 33,600,000 people

SAM 15,000 People

SOM 3000 People

B2B

SereneSight aims to establish strategic partnerships with private companies, corporations, and manufacturing facilities that specialize in employee wellness programs.

B2G

SereneSight aims to collaborate with government agencies and state-owned enterprises to enhance employee mental health monitoring through innovative and cost-effective solutions.

| Conclusion

SereneSight demonstrates how AI-based microexpression analysis and automated emotional monitoring can elevate workplace mental health management to a new standard. By integrating real-time facial expression detection, personalized fatigue recommendations, early warning systems, and cost-effective design, SereneSight empowers companies to proactively monitor employee well-being and foster a healthier, more productive work environment.

| The Result

Attitude toward using (ATU):

Average ATU: 4.3

Interpretation: Respondents tend to perceive this technology as easy to use.

Behavioral Intention to Use (BITU):

Average BITU: 4.4

Interpretation: Respondents tend to have a strong positive intention to use the system.

Actual System Use (ASU):

Average ASU: 4.2

Interpretation: The actual level of technology usage is relatively high. You can evaluate whether this aligns with expectations or if there are areas that need improvement.

Perceived Ease of Use (PEOU):

Average PEOU: 4.1

Respondents tend to have a very positive attitude toward the use of technology.

Perceived Usefulness (PU):

Average PU: 4.2

Interpretation: Respondents tend to perceive the technology as highly useful.
