

Our Features

UV-C
sterilization

Prevent
pathogens

Automatically
clean

Easy control

Optimal
protection

AI Classification

How it Works

Place the food

Close the chamber

Activate UV light

Food is safe to serve

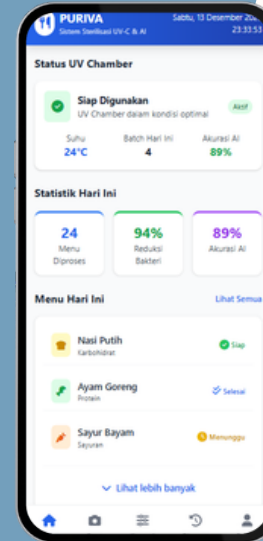

Problem

A total of 16.000 schoolchildren were exposed to bacterial contamination through the free meals program, which may have resulted from unhygienic processing, inadequate storage, non-standard distribution, or contaminated raw materials.

Solution

Puriva offers a smart solution for safer food consumption by using UV-C technology to eliminate harmful microbes, extend freshness, and ensure better protection through intelligent IoT and AI monitoring.

PURIVA

PURIVA : A Smart UV-C Chamber for Eliminated Pathogen on Food Surface with AI-Based Food Classification to Reduce Food Poisoning in Indonesia's Free Meal Program

Our Website

Eat Safe, Life Well!

Vision

To create a safe and healthy work environment, free from food contamination, through smart purification technology designed with a human-centered approach.

Mission

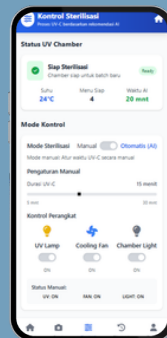

Mission

- Smart Purification: Advanced UV-C system for air and surface sterilization.
- Health & Safety First: Protects users with simple and safe operation.
- Human-Centered Design: Minimalist, functional, and intuitive for local needs.
- Food Safety Awareness: Supports education on hygiene and safe practices.
- Continuous Innovation: Ongoing upgrades to meet modern food safety challenges.

What Is PURIVA?

PURIVA is a Smart UV Chamber designed with a Human-Centered Design approach to ensure safe and hygienic meals. Using advanced UV-C sterilization, PURIVA provides an effective, user-friendly, and reliable solution to minimize food contamination in Indonesia's Free Meals Program.
